CLINICAL MICROBIOLOGY REVIEWS

There has long been a need for a review journal devoted exclusively to clinical microbiology. In January 1988, CMR will fill that need. This new publication is directed toward clinical microbiologists, medical microbiologists and immunologists, public health workers, and infectious disease specialists who are interested in the pathogenesis, diagnosis, epidemiology, and control of human and veterinary pathogens. The journal will be very useful to the bench technologist as well as laboratory directors and infectious disease practitioners because the information will be relevant to what people in the laboratory are doing. The articles are intended to give them an extensive overview of what is current in the field.

All areas of clinical microbiology and immunology, including bacteriology, mycology, virology, and parasitology, will be covered. Selected articles will focus on specific or groups of pathogens, clinical and laboratory aspects of newly recognized or reemerging infections, recently developed antimicrobial agents and their applications, and new diagnostic laboratory technology.
